

QT打包教程

1.在QT使用release构建项目

Figure 1

2.找到release构建生成的exe路径

如D:\C++\lab5\build\Desktop_Qt_6_5_3_MinGW_64_bit-release\release

3.找到构建套件（在1可以看到）

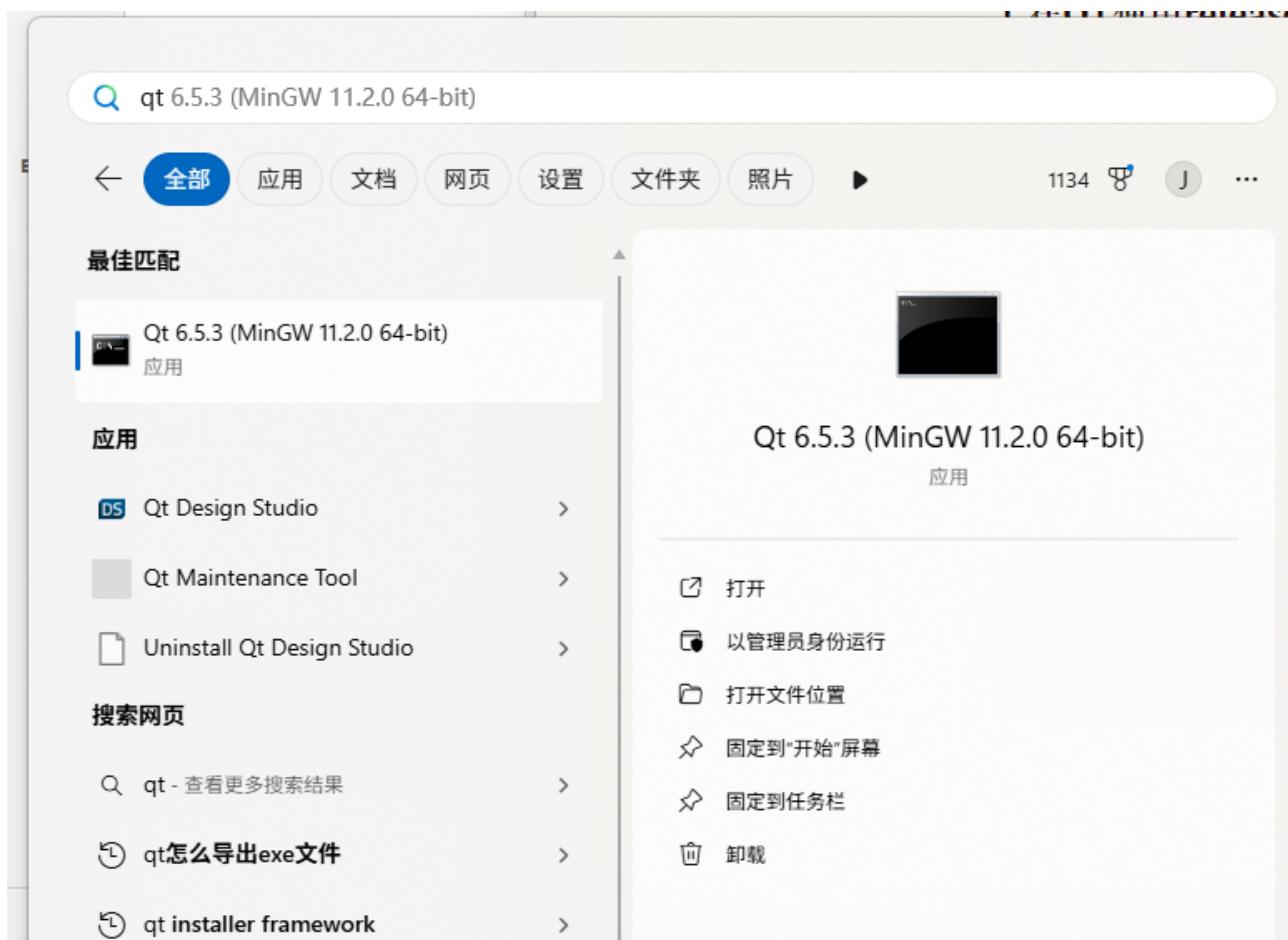

Figure 2

4.打开构建套件

输入

```
cd D:\C++\lab5\build\Desktop_Qt_6_5_3_MinGW_64_bit-release\release  
(即刚刚的路径)
```

Fence 1

然后输入

```
windeployqt lab5.exe (程序名换成自己的)
```

Fence 2

5. 打开Enigma Virtual Box

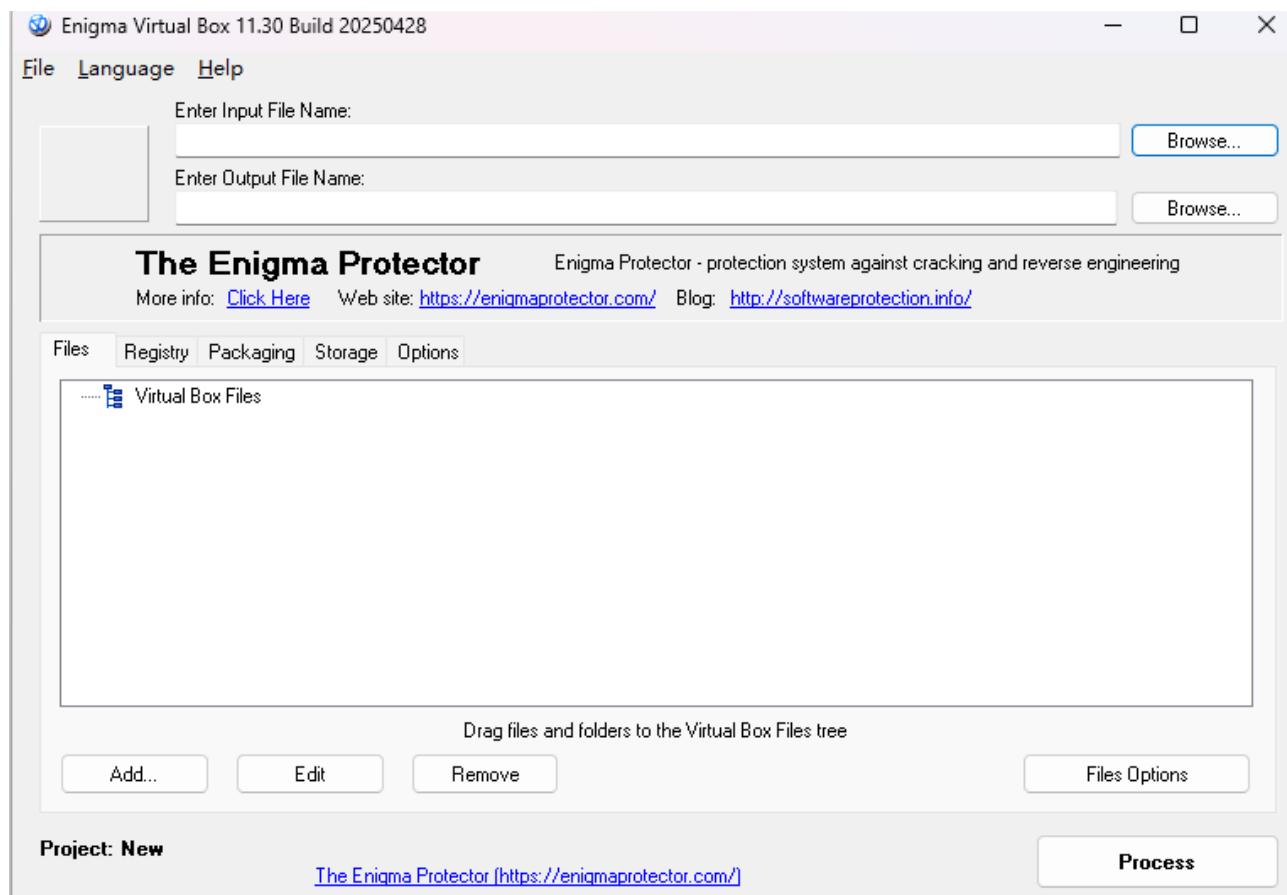

Figure 3

将刚刚windeployqt生成的所有依赖拖进去打包即可。
